

Easy Sorter

Author: Okba Allaoua

Difficulty: Easy

Description

You are tasked with implementing a function that sorts an input string based on the following rules:

1. Capital vowel characters.
2. Small consonant characters at indexes that are divisible by 4.
3. Capital consonants characters.
4. Capital consonant characters at indexes that are divisible by 4.
5. Digits.
6. Symboles.
7. Small vowel characters.
8. Small consonant characters.

A small reminder that:

Vowels are: **aeiouy**.

Constantes are: **bcd fghjklmnpqrstvwxyz**.

Digits are: **0123456789**.

Symbols are: **!@#\$%^&*()_+/\][{}";'<>?**

Div 4 index Characters are: **dhlptx**.

Inputs

- You will be given one line containing a single string that should be

sorted in the rules given above.

Outputs

- The final result is the input string sorted after applying the rules!

Constraints

- Make sure to follow the rules strictly.
- Spaces are striped from the input strings, which means not taken into consideration.

Examples

Input	Output
