

LazyNerd Problem

Author : Aniss Benstaali

Difficulty: easy

Time limit per test: 2ms

Description

You are given a non-negative integer n , and your task is to output two numbers x and y such that:

1. $x \leq y$

2. $\text{ppcm}(x,y) + \text{pgcd}(x,y) = n$

Where:

- $\text{ppcm}(x,y)$ is the least common multiple (LCM) of x and y .
- $\text{pgcd}(x,y)$ is the greatest common divisor (GCD) of x and y .

Input

The first line contains a single integer n ($1 \leq n \leq 10^7$)

Output

Print two integers x,y that satisfy the previous conditions.

Examples

Input	Output
6	2 4
14	4 6
